1:100 000 geological map - Three Rivers (2747), first edition

Citation

Unique ID	12BF38D4-3190-497E-AE5F-6C2DFD9D7608
Title	1:100 000 geological map - Three Rivers (2747), first edition
Jurisdiction	Western Australia

Description

Abstract	Detailed geological mapping at 1:100 000 providing information on geological units, structural geology and faultlines, to produce a geological plan of the Three Rivers region of Western Australia. The map was published in 2014. This data is held in GDA decimal degrees.

Dataset Status

Status	completed
Maintenance and Update	asNeeded

Access

Available Format Type(s)	ESRI shapefiles, MapInfo Tab files, MS Access mdb (database) files, CSV tables, JP2 Images, and PDF documents
Available Format Version(s)	ESRI layer files and mxd version 10.1, MapInfo 10, MS Access 2002-03.mdb
Access Constraints	copyright
Linkage	http://www.dmp.wa.gov.au/ebookshop/
Application Profile	Data and Software Centre
Function	download

Data Quality

Lineage	This dataset has been compiled from information collected from field notes and input from aerial photo interpretation. Original projection MGA Zone 50.
Positional Accuracy	0 metres to 100 metres

Attribute Accuracy	Geological units classified by standard geological nomenclature showing rock types (together with the lithographical formations in pre 1984 series). Units are identified by standard colours and symbols. The accuracy of the attribute information in this dataset is estimated at 98%.
Logical Consistency	All converted data was visually compared with original map work to verify complete capture and attribution.
Completeness	This edition is complete and has been verified. It forms part of an ongoing series.
